TO TEETH

Vitamin C

Contributes to the normal formation of collagen of blood vessels, bones, cartilage, gums, skin, and teeth.

It supports energy metabolism, nervous system, and immune function.

It helps protect cells from oxidative stress, reduces tiredness and also enhances iron absorption.

Vitamin B6

Contributes to normal cysteine synthesis, normal energy metabolism, normal functioning of the nervous system, and immune system. Additionally, vitamin B6 helps reduce tiredness and fatigue and contributes to the regulation of hormonal activity.

Vitamin A

Contributes to normal iron metabolism and helps maintain normal mucous membranes, skin, and vision. It also supports immune system function.

Vitamin D

Contributes to the normal absorption and utilization of calcium and phosphorus. It maintains normal blood calcium levels, bones, muscle function, and teeth

It also contributes to immune system function and cell division.

Vitamin E

Contributes to the protection of cells from oxidative stress.

Vitamin B12

Supports energy metabolism, nervous system function, and homocysteine metabolism. It supports psychological function, red blood cell formation, and immune system health.

Folic Acid (Folate)

Contributes to amino acid synthesis, blood formation, and homocysteine metabolism. It supports psychological function and immune system function. It reduces tiredness and fatigue, and plays a role in cell division.

Biotin

Supports energy metabolism, nervous system function, and macronutrient metabolism. It contributes to psychological function. It helps maintain healthy hair, skin, and mucous membranes.

Vitamin PP (Niacin)

Supports energy metabolism, nervous system function, and psychological function. It helps maintain healthy mucous membranes and skin. It reduces tiredness and fatigue

Food supplements

should not be considered as substitutes for a varied and balanced diet and a healthy lifestyle.
